

July 2004

To Whom It May Concern:

Murray Company performed a 42,000 square foot Addition/Renovation project at Lincoln County Medical Center, which started in April 2001 and was completed in March 2003. The project included a one-story, 22,700 square foot Addition to the existing Hospital for a new Emergency Department, Intensive Care Unit, Main Entry Lobby/Registration, Chapel and Ambulatory Surgery. The renovation work included Laboratory, Radiology, Cardio-Pulmonary, Outpatient Cardiac Rehabilitation, Physical Therapy, Medical Records and Conference/Classroom.

The New Addition required the complete reconstruction of the Hospital's main parking lot due to grade changes. In order to keep drive lanes open, parking spaces available, and provide access to the temporary Main Entrance and temporary ER Entrance at all times, Murray Company performed this work in various separate phases.

The remodeling phase of the project included gut renovation of the entire Laboratory and a substantial portion of our Radiology Department. Murray Company's strict adherence to infection control and life safety procedures was viewed by the Hospital as extremely beneficial given today's regulatory environment.

Murray Company did an excellent job of coordinating the construction and keeping access to our services for patients, with a minimum of inconvenience. Based on our experience, we have complete confidence in their ability to successfully manage a complicated Hospital building project while working in close proximity to patients, visitors, and staff.

If you should have any questions about our project, or Murray Company's performance, please do not hesitate to contact me directly.

Sincerely,
